

TWO LEADING TEST SPECIALISTS FORM PARTNERSHIP

Two leading specialists in software and systems testing, each acknowledged for providing innovative and pragmatic solutions in their complimentary test disciplines, have joined together to provide a valuable proposition to their clients.

The partners – nFocus Testing and Reflective Solutions provide the knowledge, expertise and technology to allow organisations to rapidly benefit from cost effective approaches to functional, regression and performance testing.

The services offered by nFocus and Reflective now encompass full-lifecycle testing consultancy, test project delivery and specialist solutions in the areas of performance and the automation of functional and regression tests.

Ross Lister, Managing Director of nFocus commented: “nFocus are confident that Reflective’s solution for performance benchmarking will provide the same high quality benefits that our clients expect but at a more competitive cost.

Together with our approach to functional and regression test automation, we have a very powerful partner proposition to take to the market.”

Graham Parsons, Chief Executive Officer of Reflective Solutions, added: The partnership means we can now answer our clients, who regularly ask for consultancy and professional services relating to wider quality issues”.

With technology becoming such an important part of our everyday lives, quality and reliability is a must. Whilst traditionally the testing function has been seen as very expensive it can now be an important competitive advantage.

Dan Crone, Technical Director at nFocus says “Testing is becoming more valued and stretched in its role across the development lifecycle, what we have to do as specialists is show our clients how to get the best value from their testing discipline by creating better solutions. The tools and approach that we use for automating tests and Reflective’s StressTester™ performance testing software are both easy to use, which is very important for providing the benefits of testing more efficiently”.
